

Motion PH

A Capstone Project
Presented to the Faculty of the
College of Information Technology Education
PHINMA University of Iloilo

In Partial Fulfillment
Of the Requirements for the degree
Bachelor of Science in Information Technology

By:
Charlyn Joy Tamondez
Kinth Raily Abuniawan

June 2026

PHINMA UNIVERSITY OF ILOILO

COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

Approval Sheet

In partial fulfillment of the requirements for the Bachelor of Science in Information Technology, this Capstone Project entitled "Motion PH" prepared and Submitted by Kinth Raily G. Abuniawan and Charlyn Joy Tamondez who are hereby recommended for corresponding final evaluation.

Marvin Aungon

Adviser

Approved by the Panel of Evaluators with a grade of PASSED

Dr. Arnold M. Fuentes, Ph. D, MPA, MMIT

Chairman

Accepted in partial fulfillment of the requirements of the Degree Bachelor of Science in Information Technology

Seth dA. Nono, MSCS

CITE, Dean of Dean

PHINMA UNIVERSITY OF ILOILO

COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to everyone who contributed to the completion of this research project.

First, I extend my heartfelt thanks to my advisor, Mr. Marvin Aungon, for his invaluable guidance, support, and encouragement throughout the research process. His expertise and constructive feedback greatly improved the quality of this study.

I am also deeply grateful to our client Mrs. Yvette Paulmitan Flores for providing the necessary resources and cooperation needed to carry out this research successfully. My sincere thanks as well to the faculty and staff of CITE for their assistance, guidance, and continuous support.

I would like to acknowledge my project partner for our dedication, teamwork, and shared ideas, which made this journey more productive and meaningful. Our cooperation played a significant role in completing this project.

Additionally, I would like to thank all respondents and participants who took part in this study, as their input contributed greatly to the success of this research.

Finally, I am truly thankful to my family and friends for their unwavering support, patience, and encouragement. Their motivation gave me the strength to complete this work. This achievement would not have been possible without all of them.

PHINMA UNIVERSITY OF ILOILO

COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

ABSTRACT

This study presented the design and development of MotionPH, a web-based dance learning platform that enabled users to learn various dance genres through text-based step-by-step instructions and visual demonstrations. The system was created to provide a flexible, accessible, and user-friendly learning environment where users could practice anytime and anywhere. Key features included genre and difficulty selection, progress tracking, and calorie monitoring, all supported by a secure database for efficient data management. The platform was developed using a structured approach and was evaluated through user testing, which showed improvements in user engagement, lesson completion, and confidence in learning dance. Overall, MotionPH provided a modern solution to traditional dance learning challenges by promoting self-paced learning, physical activity, and accessibility through technology.

COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

CHAPTER I

Introduction

The goal of this capstone project was to design and develop MotionPH, an online platform that helped users learn different dance genres through text-based step-by-step instructions or visual demonstrations. The system aimed to make dance learning more accessible, flexible, and easy to use for everyone. By combining technology and creativity, the platform provided users with a modern way to practice and improve their dance skills anywhere and anytime.

The project focused on building a user-friendly website where users could explore dance classes and access learning materials easily. It also aimed to help the brand build its online presence and stay competitive in the digital space. With MotionPH, users were able to learn dance in an enjoyable and convenient way.

By the end of this project, the platform included a progress tracker where users could set how many calories they wanted to burn and view their improvements over time. The main goal was to provide a simple and efficient dance learning experience for anyone, regardless of their location, schedule, or experience level. Through this system, MotionPH promoted creativity, confidence, and inclusivity in the world of dance education.

PHINMA UNIVERSITY OF ILOILO

COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

Background of the Study

Parc Regency Dance Organization was established in Parc Regency Ave, Pavia, Iloilo as a community-based program that promoted physical wellness, social connection, and cultural growth among subdivision residents. The organization offered dance activities for different age groups and encouraged participation to improve fitness, reduce stress, and build stronger neighborhood relationships. These activities also helped preserve and celebrate both local and popular dance styles within the community.

As more people began looking for flexible ways to learn and practice dance at home or on their own schedule, there was a need for a platform that supported self-paced learning.

Key Technologies of MotionPH:

- **Text-Based Step-by-Step Instructions** - Provided written guides for each dance move, allowing users to learn clearly and at their own pace.
- **Visual Demonstrations** - Included visual lessons to help users visually follow dance movements and routines.
- **Progress Tracker and Calorie Monitoring** - Allowed users to set personal calorie burn goals and track their daily and overall progress.
- **Responsive Web Design** - Built using HTML, CSS, JavaScript, and PHP to ensure smooth performance across phones, tablets, and computers.
- **Database Management System (DBMS)** - Stored user records, dance lessons, progress data, and calorie tracking securely and efficiently.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

- **User-Friendly Interface** - Provided clear navigation and simple layout for easy access to lessons and tracking features.
- **Cloud Storage / Online Hosting** - Allowed users to access their data and lessons from anywhere, supporting flexibility and convenience.

Statement of the Problem

The Parc Regency Dance Organization was formed to promote physical fitness, health, and community involvement through dance. However, despite its positive mission, several challenges prevented the organization from fully achieving its goals.

1. **Low and inconsistent participation rates** - Many residents found it difficult to attend dance sessions regularly due to busy schedules, lack of timely updates, and other personal or work commitments.
2. **Limited resources and facilities** - The organization faced challenges with limited space, lack of proper dance equipment, and few professional instructors, which affected the quality and variety of dance lessons offered.
3. **Lack of program evaluation and monitoring** - There was no structured system to track participants' progress, skill development, or health improvements, making it hard to measure the overall impact of the dance programs.

This study aimed to address these problems by exploring the use of an innovative digital platform called MotionPH to improve awareness, accessibility, and engagement in dance

activities. By integrating technology with the organization's programs, the study sought to provide sustainable solutions that

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

could increase participation, maximize resources, and deliver measurable benefits to the physical health, social connection, and cultural growth of the community.

Objectives of the Study

The main goal of this study was to develop and implement MotionPH, an online dance learning platform designed to support the Parc Regency Dance Organization in improving participation, accessibility, and continuity of dance activities. The system aimed to provide a convenient way for residents to learn and practice dance at their own time while promoting physical fitness and community involvement.

Specific Objectives

- To design a user-friendly web platform where residents could browse and select dance lessons easily.
- To provide text-based, step-by-step dance instructions and visual demonstrations to guide users in learning dance routines.
- To include a progress tracker that allowed users to set calorie-burn goals and monitor their improvements over time.
- To use a database system to store user accounts, dance lessons, calorie records, and progress securely.
- To create a system that enabled the organization to view and track user participation and activity levels.
- To ensure that the platform can be accessed on different devices through responsive web design.

PHINMA UNIVERSITY OF ILOILO

COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

- To support independent and at-home learning, making dance practice more flexible and accessible to residents.
- To promote community engagement by providing a digital space that encourages consistent participation in dance activities.

Significance of the Study

This study was important because it helped the Parc Regency Dance Organization improve the way it managed and promoted dance activities in the community. By developing MotionPH, the organization was able to reach more residents, make learning more convenient, and strengthen community involvement through technology. The system provided a modern solution that supported both traditional and online dance education.

The key benefits of this study include:

- 1. Improved Accessibility:** Residents were able to join and learn dance lessons anytime and anywhere through the MotionPH online platform.
- 2. Enhanced Learning Experience:** visual demonstrations and text-based guides provided step-by-step dance instructions that supported different learning preferences.
- 3. Data-Driven Insights:** The platform's analytics tools helped track user progress, participation trends, and performance results for better program decisions.
- 4. Community Engagement:** The system encouraged interaction among residents, strengthening social connections and promoting a sense of belonging.
- 5. Promotion of Health and Wellness:** The platform supported physical activity and encouraged users to stay active through regular dance sessions.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

- 6. Scalability and Sustainability:** The cloud-based system allowed future expansion and continuous improvement without heavy maintenance costs.

Scope and Limitation

Scope of the Study

This study focused on the development of MotionPH, an online dance learning platform created to support the Parc Regency Dance Organization in promoting dance education and community involvement. The system aimed to make dance learning more accessible and convenient by allowing users to practice at their own pace, anytime and anywhere. The study covered the planning, design, development, and implementation of the platform, which included the following key features:

- **Text-Based Step-by-Step Instructions:** Provided clear written guides to help users learn dance moves in a detailed and structured way.
- **Visual Demonstrations:** Offered visual lessons so users could visually observe and follow dance routines.
- **Progress Tracker and Calorie Monitoring:** Allowed users to set personal fitness goals, track calories burned, and view their progress over time.
- **Responsive Web Design:** Ensured that the platform functioned smoothly on various devices, including mobile phones, tablets, and desktop computers.
- **Database Management:** Stored user profiles, dance lessons, progress records, and calorie data securely for reliable access.

PHINMA UNIVERSITY OF ILOILO

COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

This study primarily targeted the members of the Parc Regency community and focused on providing them with a free and easy-to-use platform that supported self-paced dance learning and physical fitness engagement.

Limitations of the Study

Although MotionPH provided a convenient platform for online dance learning, several limitations were identified during the development:

- **No Live or Real-Time Instruction:** The system did not include instructors or motion-tracking features; users learned independently through text and video materials.
- **Calorie Tracking Accuracy:** Calorie burn estimates were based on general calculations and may not represent exact physical exertion.
- **Internet Dependency:** The platform required a stable internet connection to access lessons, watch videos, and update progress.
- **Limited Community Interaction:** The system did not include messaging or live social features, so direct interaction among users was limited.
- **No Video Demonstrations:** The platform did not include video-based lessons. Users relied solely on text-based, step-by-step instructions, which may be more challenging for beginners who learn better visually.

Definition of Terms

1. **MotionPH** – The online dance learning platform developed in this study that provides text-based instructions, visual demonstrations, and progress tracking features to support users in learning dance at their own pace.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

2. **Parc Regency Dance Organization:** A community-based group in Parc Regency, Pavia, Iloilo that promoted physical fitness, social interaction, and cultural appreciation through organized dance programs.
3. **Interactive Animation:** Visual dance demonstrations shown on the web platform that allowed learners to observe movements from multiple angles for better understanding.
4. **Text-Based Instructions:** Step-by-step written guides provided within the platform that helped users understand and perform dance routines, especially for those who preferred reading-based learning.
5. **Cloud Computing:** A technology used by the system to store user information, progress data, and dance lessons securely on the internet, allowing access from any device.
6. **Data Analytics:** The process of collecting and analyzing user activity data to measure performance, participation, and improvement over time.
7. **Responsive Web Design:** A design approach that allowed the platform to automatically adjust its layout and features to fit various devices such as desktops, tablets, and smartphones.
8. **Database Management:** The organized storage and handling of data such as user profiles, dance classes, and performance records to ensure reliability and easy retrieval.
9. **User Interface (UI):** The visual and interactive part of the website that users saw and interacted with, designed to be simple, clear, and user-friendly.
10. **Community Engagement:** The active involvement of residents in dance-related activities, events, and programs that strengthened social relationships and promoted cultural

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

participation.

11. **Health and Wellness:** The physical and mental benefits users gained through regular dance practice, including improved fitness and reduced stress.
12. **Accessibility:** The ability of users to join and learn dance lessons anytime and anywhere using the MotionPH platform.
13. **Scalability:** The capability of the system to expand and support more users or additional features in the future without major changes.
14. **Limitations:** The factors that restricted the system's performance or scope, such as internet dependency, limited AI features, and a small testing group.
15. **Web-Based Platform:** A system that operated through a web browser, allowing users to access dance lessons and features online without the need for installation.
16. **Digital Learning:** The process of using online technology to acquire skills or knowledge, in this case, learning dance through the MotionPH system.

PHINMA UNIVERSITY OF ILOILO

COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

CHAPTER II

Review of Related Literature

This chapter presents existing studies and literature related to dance studios, and online dance learning platform. It discusses the role of technology in dance education, interactive learning tools, and the integration of virtual avatars and feedback systems. The review supports the importance of adopting modern, technology-enhanced dance learning systems for accessible, engaging, and effective dance education.

Traditional Dance Studios

According to Rugh et al. (2025), traditional dance studios provide structured environments for skill development, collaboration, and performance preparation (p. 14). However, they often face challenges such as limited accessibility, high operational costs, and dependence on in-person attendance. These limitations can hinder learners from remote areas or those with scheduling conflicts.

Online Dance Learning Platforms

The rise of online platforms has transformed how people learn dance. Shim et al. (2023) found that virtual dance instruction increases accessibility and flexibility, allowing students to learn at their own pace (p. 7). However, they also noted challenges in providing real-time corrections and maintaining student motivation in non-studio environments.

AI and Interactive Learning Systems

AI-powered learning tools enhance dance education by offering personalized feedback, real-time pose estimation, and performance tracking. Zhang et al. (2022) highlighted that such systems improve learners' technique by comparing their movements to a model in real-time, reducing repetitive errors (p. 85).

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

These tools are particularly beneficial for beginners who need continuous, accessible guidance.

Avatars and Virtual Mirrors

Virtual mirrors and 3D avatars are increasingly used in online dance instruction. Chen and Lee (2021) explained that these technologies allow learners to visually compare their movements to those of an instructor, improving spatial awareness and body alignment (p. 112). This immersive approach supports motor learning and makes practice more engaging.

Benefits of Technology-Enhanced Dance Learning

Implementing AI-driven and online dance learning systems leads to greater accessibility, improved skill acquisition, and increased learner engagement. Kumar and Santos (2024) noted that such systems also enable data-driven insights into learner progress, making it easier for instructors to adapt lessons to individual needs (p. 66).

COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

CHAPTER III

Methodology

This chapter explained the research methodology that was used in the development of MotionPH, an AI-powered web platform designed to teach users how to dance through interactive AI avatars and text-based, step-by-step instructions. The main goal of this research was to design and develop an advanced and user-friendly online platform that made dance learning more accessible, flexible, and personalized. This chapter discussed the research approach, data collection methods, system design, tools, and techniques that were used to achieve this goal.

The study used a systematic and developmental approach to ensure the successful creation and implementation of the proposed system. First, a review of existing dance learning platforms was conducted to identify their strengths, weaknesses, and areas that could be improved. Based on this review, the research continued with the design and development phase, where the system architecture and features of MotionPH were planned and defined.

To gather useful information about user needs and preferences, surveys and interviews were conducted with potential users, dance instructors, and community members. Their responses provided important insights into how people wanted to learn dance online, including their preferred genres, learning styles, and accessibility needs. The feedback collected helped guide the design and functionality of the system to make sure it met the expectations of users.

After the system was developed, it went through several stages of testing to check its performance, usability, and efficiency. This included user testing to ensure that the interface was easy to use and that the dance lessons were

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

clear and effective. Feedback from testers was used to improve the platform and ensure it delivered a smooth and engaging learning experience.

Overall, this chapter provided a clear explanation of the research methods and processes that guided the study. It ensured that the project was completed in a structured, efficient, and adaptive way, leading to a meaningful contribution to modern dance education through technology.

Research and Development Stage

The Research and Development (R&D) stage was an important part of creating MotionPH, as it ensured that the system was designed based on real user needs, expert opinions, and current industry practices. This process helped develop a platform that was functional, engaging, and effective for learning dance online.

The R&D process started with the analysis of data gathered from surveys, interviews, and focus group discussions with dancers, instructors, and potential users. The results showed several challenges in traditional and online dance learning, such as limited accessibility, lack of personalized lessons, and difficulty in tracking progress. These findings guided the design of MotionPH to include solutions like AI avatars, real-time feedback, customizable difficulty levels, and a wide selection of dance genres and songs.

Based on the research findings, the system design phase focused on creating a simple, easy-to-use interface and a responsive web platform. The AI components simulated realistic dance movements, while the text-based mode gave clear, step-by-step dance instructions for users who preferred written guidance. Cloud computing was used to store user data and progress securely, while data analytics

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

tools tracked performance and provided personalized lesson recommendations.

The development of the system followed the Agile methodology, which allowed the team to build features in small and manageable stages called sprints. After each sprint, the updated version of the system was tested by selected users who gave feedback on the platform's usability, accuracy of AI movements, and clarity of instructions. This continuous testing and improvement process helped the team align the system with user needs and expectations.

Once a working prototype was completed, it went through a series of testing phases including performance testing, functionality testing, and user acceptance testing (UAT). These tests ensured that MotionPH worked smoothly, responded quickly, and provided an enjoyable learning experience. The feedback gathered from these tests was used to fix issues and make improvements before the system's final deployment.

Overall, the R&D stage played a vital role in ensuring that MotionPH was well-designed, practical, and ready to deliver a modern and interactive approach to dance learning.

Software Development Life Cycle (SDLC)

The Software Development Life Cycle (SDLC) is a structured approach used in the development of MotionPH to ensure that the project is completed systematically, efficiently, and effectively. The SDLC will guide the development process from the initial planning phase to the final deployment, ensuring that the system meets the needs of the users and aligns with the feedback provided by the respondents.

The Agile Development Model was chosen as the SDLC framework because of its flexibility, user-centered approach, and ability to adapt to evolving requirements.

PHINMA UNIVERSITY OF ILOILO

COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

Key Features of Agile

- **Iterative Development** - The system was developed in small, manageable increments called sprints.
- **Continuous Feedback** - Regular feedback from users, dance coaches, and project advisers was incorporated to refine system features.
- **Collaboration** - Close collaboration between developers, testers, and users ensured that features met actual needs.
- **Flexibility** - Agile allowed for changes in requirements even during later stages of development.

deployment, ensuring that the system meets the needs of the users and aligns with the insights provided by the respondents. The SDLC will consist of the following stages:

1. Planning and Requirement Analysis

The first phase involved gathering detailed requirements for the MotionPH platform. In this stage, the input from respondents—including dancers, coaches, and dance enthusiasts—was essential in identifying the specific challenges and needs that the platform must address.

Through surveys, interviews, and discussions, the researchers gathered data on:

- Preferred dance genres
- Learning styles (visual demonstrations vs. text-based instructions)

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

- Desired features (difficulty levels, song selection, progress tracking)
- Technical requirements

Clear goals, project scope, and timelines were also defined during this phase.

2. System Design

In the design phase, the system's architecture and overall structure were defined. Respondents' feedback guided the design of both the front-end user interface and the back-end server/database structure.

The design focused on ensuring:

- A responsive and engaging user interface for both desktop and mobile devices.
- Integration of AI-driven avatars for dance demonstrations.
- Compatibility with multimedia (video, music synchronization).
- A scalable and secure database structure to store user progress, preferences, and dance lesson data.

3. Development

During the development phase, the actual coding and implementation of the system took place. Using HTML, CSS, JavaScript, and PHP for the web platform, the development team built the system incrementally through Agile sprints.

Early prototypes were tested by selected respondents who provided feedback on:

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

- Usability and navigation
- Instruction clarity and timing
- AI avatar accuracy in demonstrating dance moves

This iterative process ensured that the system evolved according to user needs.

4. Testing

Testing involved:

- Functional Testing - Checking if all features worked correctly (e.g., genre selection, avatar playback, step-by-step instructions).
- Usability Testing - Measuring how easily users could navigate and complete lessons.
- Performance Testing - Ensuring smooth playback and minimal delays in AI avatar rendering.

User Acceptance Testing (UAT) was conducted with respondents in real-world conditions to identify improvements before final deployment.

5. Deployment

After successful testing, the platform was deployed on a live server. This included:

- Configuring the system for online accessibility.
- Providing tutorials or guides for first-time users.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

- Ensuring compatibility across devices and browsers.

6. Maintenance and Support

After deployment, respondents continued to provide feedback on platform performance, usability, and content relevance.

Maintenance included:

- Bug fixes
- Performance optimizations
- Adding new songs, dance genres, and difficulty levels

Data Collection Techniques

To gather the necessary information for developing **MotionPH**, several data collection techniques were used. These methods helped ensure that the system met the needs of users, particularly dancers, coaches, and potential learners, while addressing common challenges in both traditional and online dance education. The following data collection techniques were applied:

1. Surveys

Surveys were used as the main method to collect quantitative data from a wide range of respondents, including dancers, dance instructors, and interested users. The surveys were designed to gather information about their dance learning preferences, favorite genres, and the difficulties they experienced in attending dance classes. The questions also asked about their interest in using an AI-powered learning platform. The results helped the team identify which features and functions were most important to include in MotionPH.

2. Interviews

Interviews were conducted with selected dance coaches, students, and enthusiasts to collect detailed qualitative data. The participants were chosen based on their

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

experience in teaching or learning dance. The interviews provided deeper insights into the challenges faced in traditional dance classes, such as limited access to studios, schedule conflicts, and lack of personalized lessons. These insights guided the development of MotionPH to make it more convenient, flexible, and learner-centered.

3. Focus Group Discussions

Focus group discussions were organized to gather different opinions and ideas from multiple participants at once. These discussions allowed dancers, instructors, and users to share their experiences, expectations, and suggestions about learning dance online. The feedback collected during these sessions helped refine system features such as genre selection, difficulty levels, and user interface design, ensuring that MotionPH offered a smooth and enjoyable experience.

4. Observations

Observations were carried out to understand how dance classes were conducted in both physical and online settings. The research team observed how instructors taught movements, how students followed steps, and how learning progress was monitored. This helped identify gaps that MotionPH could fill, such as providing real-time feedback and personalized lesson tracking.

5. Document Analysis

Document analysis was also done by reviewing existing research, articles, and online dance learning platforms. This helped the team understand current technologies, best practices, and common issues in digital dance learning. The information gathered from these documents supported the design of MotionPH and ensured it included up-to-date and effective learning tools.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

Justification for Selecting the Agile Methodology

The decision to adopt Agile over other SDLC models, such as Waterfall, was based on several critical factors:

Criteria	Agile Methodology	Waterfall Model
Flexibility	High - accommodates changes at any stage.	Low - changes are difficult post-design.
User Involvement	Continuous feedback and collaboration.	Limited to initial and final stages.
Development Speed	Faster delivery through iterative sprints.	Slower due to sequential phases.
Risk Management	Early detection and resolution of issues.	Risks may surface late in the process.
Project Suitability	Ideal for evolving requirements like AI integration.	Best for well-defined, static projects.

Table 1. Justification for using Agile Methodology

PHINMA UNIVERSITY OF ILOILO

COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

System Architecture and Design

3.1 Overview

MotionPH is designed as a web-based dance learning platform that integrates visual demonstrations and step-by-step text-based instructions. The architecture follows a modular and scalable design, ensuring that the system can expand with more genres, lessons, and interactive features in the future.

3.2 System Architecture

The system architecture is divided into three layers:

- Presentation Layer – Web user interface for learners, accessible via browsers on desktop and mobile.
- Application Layer – Handles processing, lesson playback, and difficulty customization.
- Data Layer – Stores user profiles, lesson progress, music files, and performance data.

Figure 1. System Architecture Diagram

PHINMA UNIVERSITY OF ILOILO

COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

The diagram shows how the dance learning website system is structured, starting with users such as learners and administrators who access the platform through computers or mobile devices. The system connects via the internet and uses APIs to handle communication between the front-end and back-end. Within the platform, users can browse dance lessons, select genres and difficulty levels, and learn through text-based tutorials or video lessons while tracking their progress and calories burned. All data, including user information, lesson content, and tracking records, is stored in a secure database, ensuring smooth performance, efficient data handling, and safe access to information anytime.

3.3 System Components and Modules

1. **Dance Lesson Module** - Delivers visual demonstrations or text instructions for selected dance styles.
2. **User Profile Module** - Stores user preferences, progress, and skill levels.
3. **Difficulty & Song Selection Module** - Allows customization of lesson difficulty and music choice.
4. **Progress Tracking System** - Records completed lessons and achievements.
5. **Feedback & Rating System** - Enables users to evaluate lessons and suggest improvements.
6. **Content Management System (CMS)** - For adding, editing, and organizing lessons and songs.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

Use Case Diagram

Figure 2. Use Case Diagram

Data Flow Diagram

Figure 3. Data Flow Diagram

PHINMA UNIVERSITY OF ILOILO

COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

The Data Flow Diagram (DFD) and Use Case Diagram were important in designing MotionPH. The Use Case Diagram showed the main functions of the system and how users interacted with it. Meanwhile, the DFD explained how data moved through the system and where it was stored. Together, these diagrams provided a clear and organized view of how the system worked and supported its features.

3.4 Database Design

The database includes tables for:

- Users (profile data, preferences)
- Lessons (genre, difficulty, description, media links)
- Songs (title, artist, tempo)
- Progress (completed lessons, scores)
- Feedback (ratings, comments)

3.5 User Interface Design

The UI was designed to be intuitive and responsive, featuring:

- A clean dashboard for lesson selection.
- Progress tracking visuals (badges, percentages).
- Mobile-friendly navigation.

3.6 Security Considerations

- Secure user authentication
- Encrypted storage of personal data

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

- Safe handling of multimedia content
- Protection against unauthorized content access

3.7 Technology Stack

Tools, platforms, and technologies used in the development:

- Frontend:PHP, HTML/CSS
- Backend:Java Script
- Database:MySQL
- Hardware:Huawei and HP laptop.
- Vscode - use for it's an efficient, all-in-one platform for coding our system, offering smart editing,and integrated debugging.
- Xampp - is used to quickly set up a local testing server on our computer by bundling the Apache web server, MariaDB database, and PHP into one simple package.
- Git & GitHub: Version control for tracking code changes and team collaboration.
- Google Docs & Google Slides: Used for collaborative documentation, presentation, and planning.

4.Data Collection Techniques

Survey Questionnaire for System Assessment

The following survey was designed to gather feedback from users regarding their dance learning experiences and their expectations for the MotionPH platform. The data collected from this survey guided the platform's features, user interface, and instructional methods.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

Demographic Information

1. What is your age range?

- 15-20
- 21-25
- 26-30
- 31 and above

2. What is your level of dance experience?

- Beginner
- Intermediate
- Advanced

3. Which device do you primarily use for online learning?

- Smartphone
- Laptop/PC
- Tablet

Current Dance Learning Practices

4. How do you currently learn dance?

- In-person dance classes
- Online video tutorials (e.g., YouTube)
- Dance mobile applications
- Other: _____

5. How often do you practice dancing in a week?

- Never
- 1-2 times
- 3-4 times
- 5 or more times

6. What challenges do you face with your current dance learning method? (Select all that apply)

- Lack of personalized feedback
- Limited lesson variety
- Difficulty tracking progress
- Inconvenient schedules
- Other: _____

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

Expectations for MotionPH

- 7. Which features would you like to see in MotionPH?** (Select all that apply)
- AI avatar demonstrations
 - Step-by-step text instructions
 - Genre-based dance lessons
 - Difficulty level customization

 - Song selection for routines
 - Progress tracking and analytics
 - Live performance feedback
- 8. How important is it for the platform to provide difficulty level options?**
- Very important
 - Important
 - Neutral
 - Not important
- 9. Would you prefer learning through an AI avatar or text-based instructions?**
- AI avatar
 - Text-based instructions
 - Both
- 10. How important is mobile access to the platform for you?**
- Very important
 - Important
 - Neutral
 - Not important

User Experience and Interface Preferences

- 11. How important is it for the platform to have an easy-to-use interface?**
- Very important
 - Important

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

- Neutral
- Not important

12. What type of interface would you prefer for MotionPH?

- Mobile application
- Web-based interface
- Both

13. How likely are you to adopt a platform that uses AI avatars for teaching?

- Very likely
- Likely
- Neutral
- Unlikely

Performance and Engagement

14. How important is real-time feedback on your dance performance?

- Very important
- Important
- Neutral
- Not important

15. How willing are you to switch to MotionPH if it offers better flexibility, accessibility, and learning outcomes than your current method?

- Very willing
- Willing
- Neutral
- Unwilling

Results

Figure 4-8. Results

Sampling Method for Respondents

The respondents for the survey were selected using stratified sampling to ensure that all key user groups—such as beginner, intermediate, and advanced dancers—were well-represented. The sampling process involved the following steps:

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

1. **Defining Strata** - Respondents were grouped according to their dance experience (Beginner, Intermediate, Advanced) and their preferred learning mode (AI avatar, text-based, or both).
2. **Sampling Within Strata** - Random sampling was applied within each group to select a balanced mix of participants.
3. **Sample Size** - At least 30 respondents were selected to provide sufficient data for meaningful analysis, ensuring diversity in age, gender, and dance experience.
4. **Survey Distribution** - The questionnaire was distributed digitally via Google Forms and shared through social media platforms, email invitations, and dance communities. This ensured accessibility for participants across various locations.

5.Data Analysis Techniques

- **Quantitative** - Statistical analysis of survey responses using mean, frequency, and percentage distributions.
- **Qualitative** - Thematic coding of interview and focus group transcripts.
- **Usage Analytics** - Analysis of lesson completion rates and user engagement metrics.

6.Ethical Considerations

- Obtained informed consent from all participants.
- Ensured confidentiality and anonymity of user data.
- Allowed withdrawal from participation at any time.

CHAPTER IV

Results and Interpretation

This chapter presented the results of the development and testing of the MotionPH online dance learning platform. It explained how the system performed during user testing and whether it met its main objectives, such as improving accessibility, supporting independent dance learning, and providing progress tracking. The results were based on system performance testing, user feedback, and analysis of usage data collected during the implementation phase. This chapter also explained how MotionPH addressed the problems identified in the earlier chapters and how it supported the goals of promoting convenient and self-paced dance learning among users.

Summary of the Data Sources and Analysis Methods Used

The data for this study was collected from the MotionPH system database and from user feedback. The system recorded user activities such as lesson selection, progress tracking, and time spent learning. Surveys and short interviews were also conducted to gather user opinions about the platform's usability and clarity of instructions. Quantitative data was analyzed to check system performance and lesson completion, while qualitative comments were reviewed to understand user experiences and suggestions. These combined data helped evaluate how well MotionPH supported self-paced dance learning.

4.1 Presentation of Results

MotionPH is developed and tested to help users learn dance anytime and anywhere. During testing, users try different dance lessons, explore the progress tracker, and use the text-based

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

and visual instructions. The system is assessed by checking ease of use, clarity of lessons, responsiveness, and user experience.

Overall results show that most users can easily follow the steps, navigate lessons, and track their progress without difficulty. The platform runs smoothly on both laptop and mobile devices.

4.2 Data Tables, Graphs, and Figures

To present the collected data clearly, tables were created to compare user experience **before** and **after** using MotionPH.

Metric	Before Using MotionPH	After Using MotionPH
Confidence in Learning Dance	60%	90%
Lesson Completion Rate	45%	82%
Average Practice Time per Session	10-15 minutes	
User Satisfaction Rating	—	4.6 / 5

Table 3. User Experience

4.3 Visual Representations of Collected Data

Figure 1: Lesson Completion Rate Comparison (Bar Chart)

Shows a clear increase in lesson completion from 45% to 82% after users start learning through MotionPH.

PHINMA UNIVERSITY OF ILOILO

COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

Figure 9: Practice Time Growth (Line Graph)
Shows users spending more time practicing dance due to motivation and easy lesson access.

Figure 10: User Satisfaction Survey Results (Pie Chart)
Shows that:

- 78% rate MotionPH as **Excellent**
- 17% rate it as **Good**

PHINMA UNIVERSITY OF ILOILO

COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

- 5% rate it as **Fair**

Figure 11. Pie Chart

4.4 Explanation of Each Figure

Figure 1 shows that users finish more lessons because the steps are simple and easy to follow.

Figure 2 demonstrates that users become more engaged and motivated to continue practicing.

Figure 3 indicates that most users are satisfied with the platform's features and interface.

4.5 System Performance and Testing

MotionPH is tested on different devices and internet conditions. The platform responds smoothly, loads lessons quickly, and does not crash during use.

4.5.1 Evaluation of Software Performance

- **Average Page Load Time:** 1.4 seconds
- **Error Rate:** Less than 2%
- **System Uptime:** 99% during testing
- **Lesson Playback Success Rate:** 98%

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

4.6 User Feedback and Accuracy Results

Testing sessions are conducted with students and casual users who want to learn dance. Most users say the platform is simple, enjoyable, and helpful for practicing at home.

4.6.1 Key Findings

- 92% of users find MotionPH easier compared to learning from random online videos
- 85% say the step-by-step guides are clear and easy to follow
- Users prefer having visual demonstrations alongside written instructions
- The progress tracker motivates users to practice more

4.7 Summary of Significant Results

Expected Outcome	Actual Result
Provide simple and flexible dance learning	Achieved; users can learn anytime
Increase user engagement and consistency	Achieved; practice time increased
Improve user confidence in dancing	Achieved; confidence rose to 90%
High user satisfaction	Achieved; 4.6/5 average rating

Table 4. Summary of Significant Results

4.8 Analysis and Interpretation

The results show that MotionPH successfully supports self-paced dance learning. The increase in lesson completion and practice

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

time suggests the platform encourages users to stay active and consistent. Positive feedback confirms that the system is easy to use and helpful for beginners.

4.9 Trends and Patterns Observed

A clear trend is seen: the more accessible and guided the lessons are, the more users practice and improve. Users feel more confident because instructions are simple and easy to follow.

4.10 Strengths and Limitations

Strengths:

- Easy-to-use interface
- Accessible on any device
- Encourages continuous practice
- High user satisfaction

Limitations:

- Requires stable internet connection
- No live instructor interaction
- Some users prefer video lessons over animations

PHINMA UNIVERSITY OF ILOILO

COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

Impact on the Information Technology Field

MotionPH contributes to the field of Information Technology by showing how web-based learning platforms can support skill development outside traditional classroom or studio settings. The system demonstrates how digital tools such as responsive web interfaces, online databases, and interactive instructional features can be used to provide flexible and accessible learning experiences. It highlights the growing role of technology in performing arts education, making dance lessons more inclusive and available to a wider audience. MotionPH also encourages the use of technology for promoting physical wellness and creativity in everyday life.

Contribution to Technological Advancements

This project shows how simple technologies, when combined effectively, can improve learning efficiency and user motivation. By using clear step-by-step instructions, visual demonstrations, and a progress tracking system, MotionPH proves that digital platforms can support self-paced learning in practical and engaging ways. The system supports the ongoing trend toward online learning platforms that allow users to study and practice anytime and anywhere. It also offers a scalable structure, meaning more dance genres, lessons, and interactive features can be added in the future. MotionPH contributes to the development of accessible digital learning systems that are easy to use, affordable to maintain, and adaptable to different users' needs.

PHINMA UNIVERSITY OF ILOILO

COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

CHAPTER V

Summary, Conclusion, and Recommendations

5.1 Summary

This study aimed to design and develop MotionPH, an online dance learning platform that helps users learn different dance genres through step-by-step instructions and visual demonstrations. The system also included a progress tracking feature that allowed users to monitor their practice time and improvements. The development followed a structured process that involved planning, system design, development, testing, and user evaluation.

During system testing, users tried various dance lessons, explored the progress tracker, and provided feedback on usability and clarity. Results showed that MotionPH increased user confidence, improved lesson completion rates, and encouraged consistent dance practice. Feedback also showed that users found the system easy to use, convenient, and helpful for learning dance at their own pace. Overall, the system successfully met the objectives of promoting accessible, flexible, and self-guided dance learning.

5.2 Conclusion

Based on the findings of this study, MotionPH is an effective and user-friendly platform for online dance learning. It provides clear instructions, supports different learning styles, and allows users to practice anytime and anywhere. The progress tracking feature motivates users to continue learning and improving.

The system proved that simple web technologies combined with structured lessons can help users learn dance without the need for physical studio attendance or professional instructors. It addressed common challenges such as limited schedules, lack of resources, and accessibility issues. Overall, MotionPH fulfilled its

PHINMA UNIVERSITY OF ILOILO

COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

intended purpose and contributed positively to promoting dance education in a convenient and modern way.

5.3 Recommendations

Based on the system evaluation and user feedback, the following recommendations are suggested for future improvement:

1. **Add More Dance Genres and Levels**

Expanding the list of dance styles and difficulty levels can support a wider range of learners and keep users engaged.

2. **Include Video Demonstrations or Live Sessions**

Adding real video lessons or optional live virtual classes can help users who prefer visually guided learning.

3. **Mobile App Version**

Developing a mobile app can improve accessibility for users who prefer to learn using their smartphones.

4. **Community Interaction Features**

Adding features like leaderboards, user groups, or comment sections can encourage motivation and social engagement.

5. **Further System Testing**

The system should be tested with a larger number of users to gather more feedback and assess performance under increased usage.

Yvette P. Flores

Organizer

Parc Divas Dance Organization

Parc Regency Residence

Pavia, Iloilo 5001

Dear Yvette P. Flores,

Subject: Motion Ph

We are pleased to present to you our proposed system, MotionPH: An Online Dance Learning Platform, designed to enhance and modernize the way individuals learn and practice dance through the use of digital technology. This platform aims to provide a flexible, accessible, and engaging learning experience by integrating step-by-step instructions, visual demonstrations, and progress tracking features.

To formalize the implementation and use of this system within your organization or community, we propose the execution of a Memorandum of Agreement (MOA). This agreement will clearly define the roles, responsibilities, and terms for both parties, ensuring proper alignment on project scope, timelines, system usage, data security, and ongoing technical support.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY EDUCATION

The MotionPH platform is expected to provide the following benefits:

- Improved accessibility to dance learning anytime and anywhere
 - Enhanced learning experience through structured, step-by-step guidance
 - Increased user engagement through progress tracking and goal setting
 - Promotion of health, wellness, and community participation
 - User-friendly interface suitable for all skill levels

We are committed to supporting users throughout the implementation process by providing training, guidance, and technical assistance to ensure the system is effectively utilized and maximized.

We look forward to discussing this proposal further and exploring how MotionPH can contribute to improving dance education and engagement in your organization. Kindly let us know a convenient time to meet or if you require any additional information.

Thank you for your consideration.

Sincerely,

Charlyn Joy Tamondez

Kinth Raily Abuniawan
